Dear Sir

Messrs Ross + Macfarlane are asking for a (1 1/2) one and
a half inch pipe for a new building at No 67
City Councillor street. I believe a (1") one inch pipe
will be sufficient for all purposes.

Please Order

Water Co.

Sir

I would respectfully offer my services
for a position in the office of the Montreal Water Co.

I have only recently arrived in
Canada from the old country & was employed for
over five years in the office of "The Glasgow Corporation
Water Trust". I beg to enclose copies of testimonials
& will be pleased to supply any other particulars
you may desire. Hoping my application may meet
with success

I am

Yours respectfully

John L. Brown

Montreal

Dear Sir:-

Some time ago I wrote you regarding a water connection to be made on Montcalm St, above Ontario. I had asked for a 3 in connection, but decided a 2 in one would be sufficient.

I was told to ask for a meter, to be installed when we would be ready for it, which will not be until this Spring. Your kind attention to the matter would much oblige,

Yours truly

Gentlemen:-

If you will kindly send us specifications of what you use in both hot and cold water Valves, we would be pleased to submit to you samples and prices. At a recent test given these Valves by the government, out of twenty Manufacturers submitting samples, our Valves were the only ones that stood the test. This is the best recommendation we can give them.

If you are in the market or not at the present time, we would be pleased to receive a line from you on this subject, and thanking you in advance for any courtesy, we are,

Yours very truly,

Dear Sir:-

We are just in receipt of your favor of the 28th regarding your order for Velocipede which was placed with us on the 20th inst. This Velocipede was shipped from Iberville on the 21st, the day after we received your order, and we cannot understand why it has not been delivered to your Water Works Department by this time, as our experience has been in the past that shipments of Velocipedes from Iberville reach us in approximately four day's time.

We can assure you that we have been doing everything in our power to effect prompt delivery of this Velocipede, and besides, keeping after the Grand Trunk ourselves.

We are today in receipt of a letter from the Manufactures at Iberville, stating that they are having the machine traced from their end as well. We sincerely trust to be able to deliver this to you by tomorrow, but will not give the Grand Trunk freight Authorities a moment's peace until it is actually in your hands.

Yours very truly,

12154

Messrs. Dominion Coal Co.,
112 St. James St.,
Montreal.

Dear Sirs,

Referring to my conversation with your
Mr. Squire in connection with siding near Montreal Water
Works.

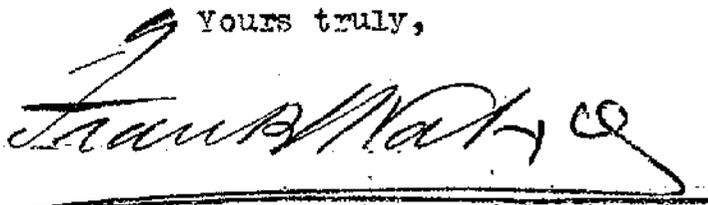

I herewith enclose you blue print showing in red
the proposed spur, total cost of which is estimated at \$972.00 .

I am advised by our Superintendent that it seems
difficult to find out from the Officials of the Water Works
just what location would be suitable, but the attached plan
seems to be most convenient from our point of view.

I understand the coal from the Water Works would be
switched from Windmill Point of Point St. Charles.

The construction of the siding has not, of course,
been approved by the Management, but if you desire to have it
constructed I will be glad to go into the matter further.

Yours truly,

Division Freight Agent

G. James Esq
Superintendent.

Dear Sir

I find nothing wrong with the water pipe in
Dr. G. I. Ross's house 40 623 Dorchester street.
That house is supplied by a one half inch
($\frac{1}{2}$ ") pipe inside & outside. The cisterns & closets
feed well. The pressure there is only 40 lbs and
we cannot give them any more. If they want
more water they will have to put in a larger
pipe from the 3rd story to curb of street. We will
then have to cut the asphalt paving all across
the street to extend that service from the curb
of street to our 12" Main.

Please Order.

Subject.....

City Surveyor's Office, de Lorimier Ave.

John R. Barlow,
City Surveyor

Montreal, 26 novembre 1907.

Monsieur John R. Barlow.

Ingénieur de la Cité,

Cher Monsieur,

En réponse à la lettre du 29 mai dernier, de Monsieur le surintendant de l'aqueduc, vous soumettant une plainte de Monsieur John Melrose, qui dit que les tuyaux de service de l'eau de sa propriété, # 93 et 95 rue Iberville, gèlent en hiver, par le fait que le trottoir a été baissé, j'ai l'honneur de vous informer comme suit:-

J'ai fait rencontrer le contre-maître Charest avec Monsieur Melrose ce matin, et voici ce qui en est; Il y a quelques années, ce trottoir a été renouvelé, et il paraît qu'il a été fait environ trois pouces plus bas que l'ancien, il est aujourd'hui au même niveau que le trottoir permanent qui vient d'être construit pour la propriété voisine.

Cette rue porte douze pieds de trottoir, et devant cette propriété, il est en bois, six pieds au milieu avec entrées. Or comme il y a une espace libre entre les madriers et la maison, Monsieur Melrose croit que l'eau peut s'introduire par là dans les vieilles coupes de l'eau sous le trottoir et faire geler les tuyaux.

Je vais sans tarder faire lever ce trottoir et remplir tous les vides que nous trouverons, c'est tout ce que nous pouvons faire pour notre part, car à part cela il est en bon état et au bon niveau

Votre tout dévoué,

A. J. Frigon
Contre-maître.

30 novembre 1907.

M. G. JANIN,

Surintendant

Département de l'Aqueduc.

Monsieur,

le 18 novembre dernier je vous rapportais les bornes-fontaines situées, l'une vis-à-vis le poste de pompiers No. 12, 310 rue des Seigneurs et l'autre en face des usines à gaz, angle des rues du Havre et LaFontaine, comme étant défectueuses. Or ayant constaté que ces bornes-fontaines n'avaient pas encore été remises en bon état, je viens une seconde fois vous demander d'y voir au plus tôt car ces bornes-fontaines seraient pour nous d'une grande utilité dans le cas d'incendie.

Votre tout dévoué

Chef du Département des Incendies.

December 10th 1907

G. Janin Esq.

MONTREAL, November 19th, 1907.

George Janin, Esq., C. E.,
General Manager & Superintendent,
Montreal Water Works, City Hall,
City.

Dear Sir:-

We desire to call your attention to the following facts in connection with our contract with the City for Worthington pumps.

As you know, we were ready for operation on the 9th of September, but owing to delays caused by breakages in the mains, it was the 30th of September before we began our thirty days trial run, as provided in the contract.

During the thirty days trial it was your desire that we should keep the pump in constant operation as far as possible, so that we were unable during that time to make all the adjustments necessary.

Our 30 days trial run was completed on the 30th October. Since that time we have been anxious to put the pump into proper condition for the duty test as called for in contract.

At your desire, however, we have been keeping the pump in constant operation, and have been standing by ready to put the

Handwritten notes in the left margin:
C. J. Janin
1907
1907

Geo. Janin, #2.

pump in operation during those times when you have been making connections to the mains.

Now all this, as you are aware, entails a great deal of extra time and expense to us, and, as the City has entered suit against us for non-delivery of pump, we think it is only just and right that we should be paid for the extra time and expenses we are being put to.

In accordance with the conditions of your specifications, we therefore ask that you allow us for the above in writing as an extra.

Yours very truly,

The John McEougall Coleridge Iron Works Co. Limited.

Monsieur,

En rapport à la correspondance qui m'est parvenue la semaine dernière, au sujet du système d'alarme, communiquant de la boutique centrale, située, rue St-Charles-Borromée, aux residences ~~residences~~ de Messrs. Cusson et Baird, de cette Cité, je dois vous dire qu'après une inspection très soignée faite à ce dit système, j'ai constaté que les lignes étaient disconnectées aux deux bouts et coupées en différents endroits et aussi construites en certaines parties avec fils découverts., ce qui cause certain contact aux lignes qu'elles rencontrent dans son parcours. Vous n'ignorez pas sans doute que cette ligne est établie et en usage depuis plusieurs années et qu'elle a été construite par des employés du département du feu je suppose. Donc je vous conseillerais si toutefois vous aspirez à utiliser ce dit système de nouveau, de vous faire construire une nouvelle ligne et installée de manière à répondre aux exigences de ce genre d'alarme.-

Esperant que ces quelques renseignements vous seront d'une bonne utilité,

je demeure, votre dévoué.-

TORONTO, ONT.HEAD OFFICE AND WORKS
HAMILTON, ONT.371 ST. JAMES ST.
MONTREAL

HAMILTON,.....

TAURIL JOINTING

IMITATED BUT NOT EQUALLED

Dear Sir,

Owing to the enormous success of our new patented high-pressure jointing material, TAURIL, for both superheated steam, water and motor car joints, we beg herewith to submit a few particulars:—

With the high pressures so much in vogue, it has been found necessary to produce a jointing material capable of withstanding the increased strain.

The majority of jointings now in the market are out of date, having been in use for the past fifteen years; the most successful of these are composition (mostly composed of gum, plumbago, etc.), and unless under most favourable conditions have a very short life.

TAURIL.—Being a high pressure jointing and suitable for either steam, water, or motor car joints, at varying temperatures up to 672° Fahrenheit, has advantages which no other jointing yet invented possesses—it can be opened up as often as desired—does not lose its elasticity (and solidify or cake),

which is the primary cause of most joints blowing out, and is therefore able to withstand increased strains with varying temperatures.

TAURIL.—Will not blow, burn, or squeeze out, having a tensile strength of over three tons per square inch, withstanding a compressive strain of fourteen tons (still retaining its elasticity.)

TAURIL.—Is not affected by a steam temperature of 672° Fahrenheit, and is therefore suitable for dry or superheated steam.

TAURIL.—Does not deteriorate with being in contact with liquids (at high pressures and temperatures), a property which no other jointing can claim.

TAURIL.—Has been used with great success in numerous refrigerating plants (Ammonia and Cold Air Systems) for compressor, motor car joints, etc.

TAURIL.—Is specially adapted for long lengths of steam piping to auxiliary machinery—subject to condensation, water, hammering, and unequal expansion.

TAURIL.—Is a fully guaranteed all-round jointing. BEWARE OF IMITATIONS, as there are several firms offering them. See that the name is stamped on every sheet. IT HAS THE LEAST SPECIFIC GRAVITY OF ANY HIGH PRESSURE STEAM JOINTING AT PRESENT ON THE MARKET.

NOTE.—Made in sheets, 40 x 40 ins., 1/32 inch, approximate weight, 3 lbs., 1/16 inch, approximate weight 6 lbs., 1/8 inch, approximate weight, 12 lbs.

Trusting to be favoured with a trial order,

Yours faithfully,

THE GARLOCK PACKING CO.
MONTREAL, P.Q.

BEWARE OF IMITATIONS.

MONTREAL, P.Q.

THE GARLOCK PACKING CO.

HAMILTON Ont. (Canada)

MONTREAL, P.Q.

Patented High Pressure Packing

"TAURIL"

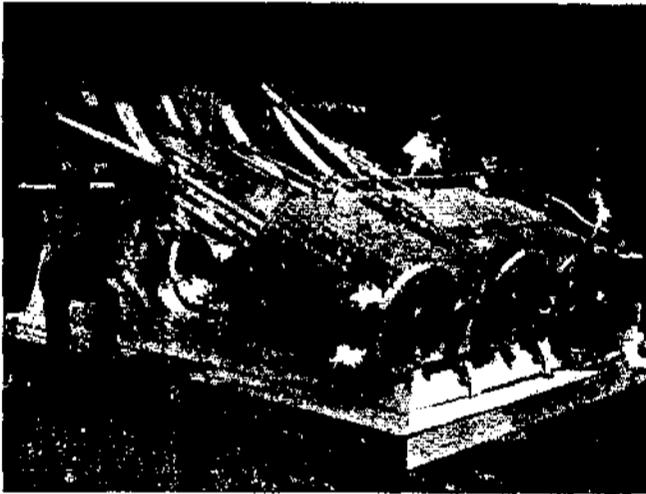

IS THE LIGHTEST PACKING IN
THE MARKET.

PATENTED IN

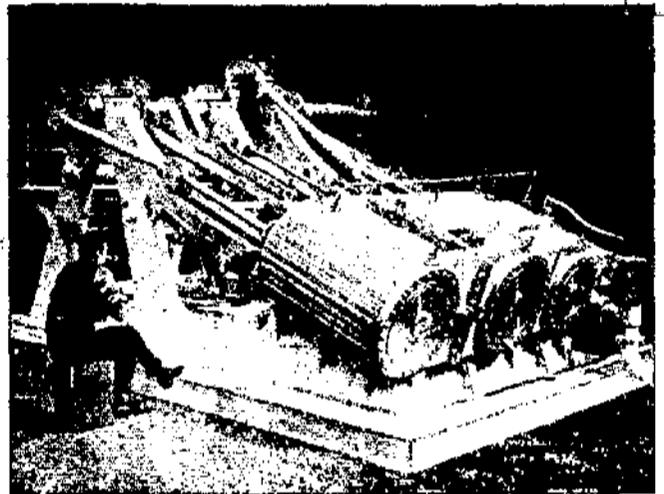

UNITED KINGDOM,	Patent No. 2556	AUSTRIA,	Patent No. 7094
FRANCE,	509381	HUNGARY,	98573
ITALY,	62753	GERMANY,	143371

REGISTERED IN THE U. S. A. UNDER No. 42,042.

REGISTERED DESIGN.

Before using Tauril Packing.

After using Tauril Packing.

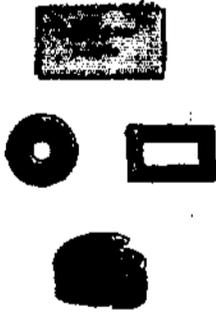

TAURIL

IS THE TOUGHEST AND BEST PACKING MATERIAL IN THE WORLD. TAURIL IS ACID PROOF. STANDS WHERE NO OTHER PACKING MATERIAL WILL STAND. IS SPECIALLY RECOMMENDED FOR MOTOR CAR JOINTS.

ACCORDING TO OFFICIAL TESTS

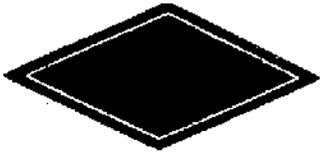

TAURIL is not affected by a steam temperature of 572° Fahr. TAURIL stands a pressure of 32,953 lbs., and has a tensile strength of 6863 lbs. per sq. inch. Therefore, 1446 lbs. atmospheric pressure is required to break a Tauril joint of 1/8" thickness, and 2317 lbs. atmospheric pressure is required to disintegrate TAURIL. There is in practice no steam pressure or overheated steam which affects TAURIL.

This Material is made in Sheets, thickness from 1/32" upwards, Sheets 3 x 6.

ROSS & MACFARLANE, ARCHITECTS
BEAVER HALL HILL
MONTREAL

Nov. 21st, 1907.

The Montreal Water Works,
Montreal.

Dear Sirs:-

We hereby make application for one inch and a half ($1\frac{1}{2}$ ")
water service for hall now in the course of erection at No. 67
City Councillors Street, Montreal.

We are,

Yours truly,

D. H. MacFarlane
